Solar Brochure

Located in over 30 countries, HellermannTyton draws upon its global resources and experience to deliver world leading cable management solutions for solar installations.

Proven performance in solar installations

Hiko and HellermannTyton believe in the importance of specially crafted products and installing the right product from the outset to lower customers operating expenses. The concealed expenses associated with subpar cable management far exceed the initial cost of implementing proper practices from the start.

Cable ties made from UV stabilised materials not only ensure durability but also offer enhanced protection against UV radiation, making them ideal for prolonged outdoor usage in a range of different climates.

Choosing the best cable management solution for solar installations is critical to longevity and safety of the assets. Failure is avoidable when quality clips, mounts, and ties, are aligned with the specific installation requirements. Talk to Hiko today about HellermannTyton's extensive selection of cable ties tailored for the solar industry.

*The use of inferior products in this application
can lead to risks of fire or deterioration*
